Branding Kit

Mission Statement

GradeNext harnesses real-world coding, math and science projects, backed by AI-driven personalization to help kids (grades 1–8) build logical thinking, creativity and tech skills from an early age.

Through block-based programming, Python web development, and personalized 1:1 tutor support, GradeNext turns young minds into tomorrow's creators.

Logo Construction

The GradeNext logo is built using a proportional system to ensure balance, clarity, and visual consistency. The logo consists of two elements: the logomark (graduation cap + coding X) and the wordmark "GradeNext." Both elements are aligned and spaced using a consistent grid structure derived from the height of the logo.

Main Color

The primary color represents the core identity of GradeNext and is used across most branding elements. With slight variations and controlled dilution, this color maintains its recognizability while enhancing content readability and visual hierarchy. Its consistent use strengthens brand recall, improves legibility, and helps create a cohesive experience across both digital and print environments.

#6B4CFF

#FFFFFF

Secondary color

The secondary color palette supports the primary brand tone by adding flexibility, warmth, and visual hierarchy to the experience. These colors are used strategically to differentiate content types, highlight categories, and bring an approachable, playful tone that aligns with GradeNext's mission of empowering young learners.

While softer and more subtle than the primary brand color, these shades create balance by breaking visual monotony and improving user flow across touchpoints. Their pastel nature ensures high readability, emotional comfort, and consistency across UI elements, cards, illustrations, and marketing materials without overpowering the core brand identity.

The secondary palette introduces personality, structure, and clarity, making the platform feel friendly, organized, and engaging across both print and digital formats.

Gradients

Gradients are used throughout the GradeNext visual identity to create depth, energy, and a dynamic learning feel. While subtle, they help guide attention, differentiate content types, and reinforce the playful but structured tone of the brand. When applied consistently, gradients enhance hierarchy and visual flow without overpowering the primary brand color.

Typography

Poppins is used as the supporting typeface across digital interfaces where web-safe delivery, accessibility, and screen clarity are essential. Its geometric structure and modern curves ensure strong readability on all device sizes, especially mobile.

Poppins should be used primarily for body text, UI elements, captions. Consistent use enhances visual harmony, improves text clarity, and maintains brand coherence across platforms.
